

# Microcapsules

*THE MICROCAPSULES REPRESENT A NEW CLASS OF MATERIALS KNOWN AS SMART CARRIES FOR BIOCIDAL AGENTS.*

These materials can be introduced to disinfection products, paper, textiles and polymers to give them biostatic or biocidal properties. The activity of these composites can be triggered by temperature or humidity, according to the specific requirements of customers. The microcapsules are a new generation of intelligent materials that will be soon widely used by cleaning companies in view of their excellent performance.

## Microcapsules:

increased biocidal  
potential of chemicals

improved cleaning  
effects of detergents

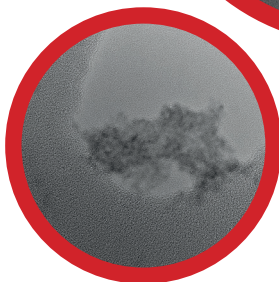

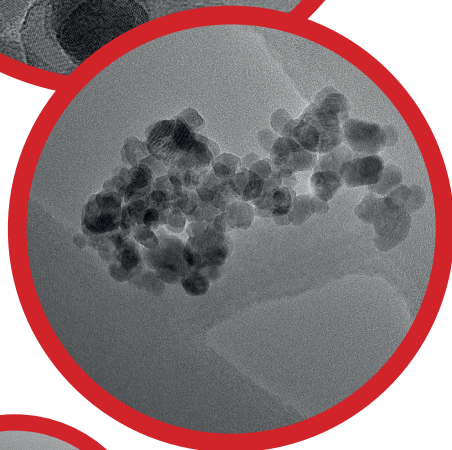

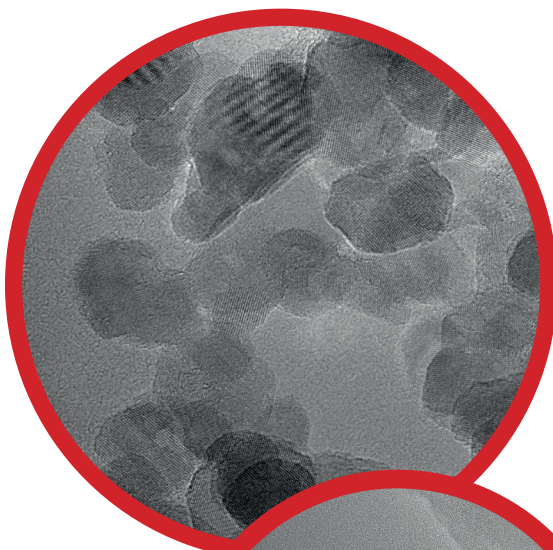

bacteriostatic effect  
of different materials  
and surfaces

highly specialised

minor environmental  
impact
